

Fast Data Integration for the Modern Enterprise

Are old ETL tools slowing down your adoption of new analytics? Are you moving to new cloud applications but struggling with legacy EAI middleware to ensure they don't become SaaS silos? SnapLogic is the industry's only unified integration platform as a service (iPaaS) built to handle the social, mobile, analytics, cloud and IoT data requirements of the modern enterprise.

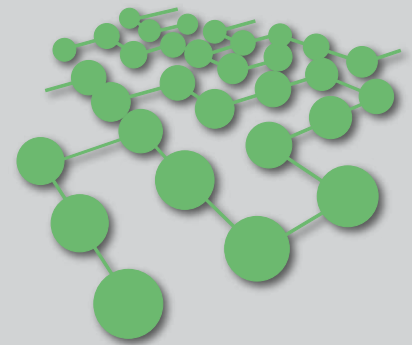

Faster Data Integration

SnapLogic's Designer, Manager and Monitoring Dashboards deliver self-service to "citizen integrators" and productivity to advanced developers who need to run at cloud speed.

Multi-Point Integration

With 300+ pre-built connectors, called Snaps, and an SDK for custom development, SnapLogic connects cloud and on-premises applications as well as big data platforms and relational and noSQL databases.

Modern Platform

Powered by the Snaplex hybrid execution grid, the SnapLogic iPaaS respects data gravity and scales out elastically to ingest, prepare and deliver data at any speed, regardless of volume and type.

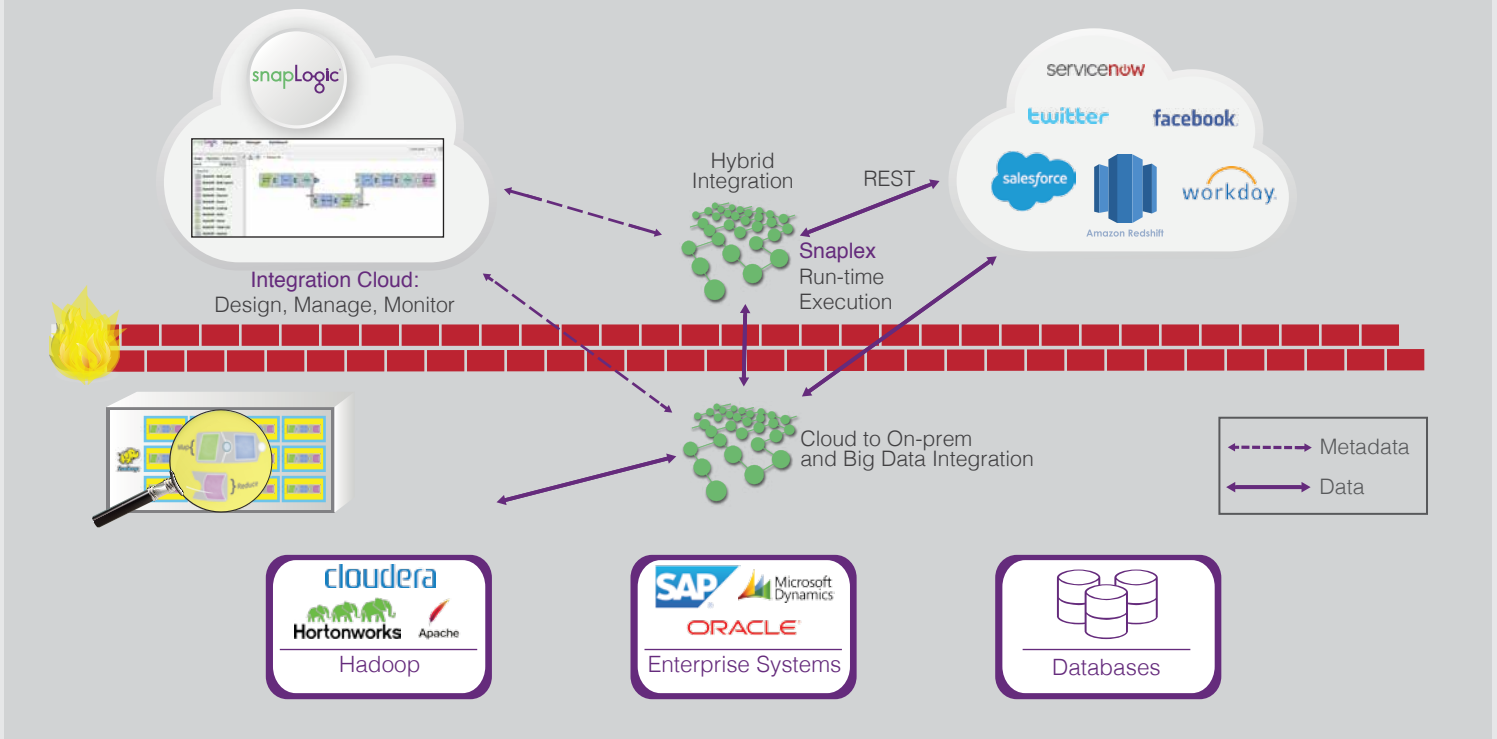

Built for the Business. Trusted by IT.

“We look at SnapLogic as an opportunity to think differently about integration.”

- Jim Teal, Information Architect, iRobot

Run Your Integrations in the Cloud, on the Ground or in Hadoop

“SnapLogic is 100% focused on delivering faster data and application integration in a single platform to meet the needs of business and IT in today's modern enterprise.”

- Gaurav Dhillon, co-founder and CEO, SnapLogic
